

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1-231. (Cancelled).

232. (Currently Amended)      A rotationally-moulded load-carrying pallet apparatus for carrying a load of at least 50 kilograms, wherein the apparatus comprises a platform and a plurality of feet that depend from the platform and wherein the pallet apparatus is manufactured substantially from and comprises a filled plastics material comprising:

at least 10% by weight of a polymer; and

at least 25% by weight of a mineral filler material comprising sand; and

at least about 0.1 % by weight but less than about 10% by weight unifier,

wherein the pallet apparatus is of a unitary structure moulded in a single rotational moulding process.

233. (Previously Presented)      Apparatus according to Claim 232, wherein the polymer comprises polyethylene.

234. (Previously Presented)      Apparatus according to Claim 232, wherein the filled plastics material comprises at least 25% by weight polymer.

235. (Previously Presented) Apparatus according to Claim 232, wherein the filled plastics material comprises from about 30% to about 70% by weight polymer and from about 70% to about 30% by weight mineral filler material.

236. (Previously Presented) Apparatus according to Claim 232, wherein the filled plastics material comprises at least about 0.25% by weight of unifier.

237. (Previously Presented) Apparatus according to Claim 232, wherein the filled plastics material comprises less than about 5% by weight unifier.

238. (Previously Presented) Apparatus according to Claim 232, wherein the unifier is pre-mixed with the mineral filler material.

239. (Previously Presented) Apparatus according to Claim 232, wherein the unifier comprises an internal lubricant.

240. (Previously Presented) Apparatus according to Claim 239, wherein the internal lubricant comprises a fatty acid amide.

241. (Previously Presented) Apparatus according to Claim 240, wherein the internal lubricant comprises a straight or branched C<sub>12</sub>-C<sub>24</sub> fatty acid amide.

242. (Previously Presented) Apparatus according to Claim 241, wherein the internal lubricant comprises stearamide.

243. (Previously Presented) Apparatus according to Claim 239, wherein the unifier further comprises an external lubricant.

244. (Previously Presented) Apparatus according to Claim 239, wherein the unifier comprises less than 20% by weight internal lubricant.

245. (Previously Presented) Apparatus according to Claim 239, wherein the unifier comprises about 10% by weight internal lubricant.

246. (Previously Presented) Apparatus according to Claim 232, wherein the apparatus is rotationally moulded substantially in one piece.

247. (Previously Presented) Apparatus according to Claim 232, wherein the apparatus comprises a pallet.

248. (Previously Presented) Apparatus according to Claim 247, wherein the pallet comprises a platform and a plurality of feet depending from the platform.

249. (Previously Presented) Apparatus according to Claim 248, wherein the feet of the pallet are regularly spaced over the lower surface of the platform.

250. (Previously Presented) Apparatus according to Claim 248, wherein the feet are arranged to enable lifting equipment to engage the pallet from any one of four directions.

251. (Previously Presented) Apparatus according to Claim 248, wherein at least one foot is arranged substantially at each corner of the platform of the pallet.

252. (Previously Presented) Apparatus according to Claim 248, wherein at least one foot is arranged substantially at the centre of the platform of the pallet.

253. (Previously Presented) Apparatus according to Claim 248, wherein at least one foot is arranged substantially at the centre of each edge of the platform of the pallet.

254. (Previously Presented) Apparatus according to Claim 248, wherein each foot has a recess in the lower surface of the foot.

255. (Previously Presented) Apparatus according to Claim 246, wherein the pallet comprises an outer skin layer having an upper surface and a lower surface.

256. (Previously Presented) Apparatus according to Claim 255, wherein the pallet further comprises an inner layer having a different composition to the outer skin layer.

257. (Previously Presented) Apparatus according to Claim 256, wherein the inner layer comprises a foaming agent.

258. (Previously Presented) Apparatus according to Claim 256, wherein the inner layer comprises at least 40% by weight of a mineral filler material.

259. (Previously Presented) Apparatus according to Claim 255, wherein the outer skin layer comprises more than about 50% by weight polymer.

260. (Previously Presented) Apparatus according to Claim 259, wherein the outer skin layer comprises about 60% by weight polymer.

261. (Previously Presented) Apparatus according to Claim 256, wherein the inner layer comprises about 60% by weight of a mineral filler material.

262. (Previously Presented) Apparatus according to Claim 256 wherein the inner layer comprises a greater amount of filler by weight than the outer layer.

263. (Previously Presented) Apparatus according to Claim 232, wherein the filled plastics material further comprises a pigment.

264. (Previously Presented) Apparatus according to Claim 232, wherein the apparatus incorporates a remotely readable ID tag.

265. (Previously Presented) Apparatus according to Claim 264, wherein the ID tag is moulded into the surface of the apparatus.

266. (Previously Presented) Apparatus according to Claim 233, wherein the polymer comprises high density polyethylene (HDPE).

267. (Previously Presented) Apparatus according to Claim 243, wherein the external lubricant comprises a stearate.

268. (Previously Presented) Apparatus according to Claim 246, wherein the apparatus comprises a pallet.

269. (Previously Presented) Apparatus according to Claim 264, wherein the remotely readable ID tag is an RFID tag.

270. (Previously Presented) Apparatus according to Claim 232, wherein the apparatus is a freight container.
